Access

Locking Procedures

- Call the lock on VHF Channel 80 (call sign Gillingham Marina Lock) before leaving your berth.
- Stay in your berth until called forward
- Set fender and warps as instructed
- If waiting for an inward lock: call the lock only when in sight; moor on a vacant deep water mooring or hold away from the lock gates, do not wait on the refuelling pontoon
- Move to the lock as soon as called
- Enter the lock only on a GREEN LIGHT - this also applies on free flow
- Move as far forward as possible; take up on the stern line first and use the vertical mooring wire
- Turn the engine and radar off
- Do not leave your boat while in the lock; the ladders are for staff use or emergencies only. The lock keeper will take the size and draft of boats into consideration when calling boats forward: boats will not necessarily always be called on a first come first served basis

Free Flow

A free flow period occurs on increasing spring tides only. Ask the Lock Keeper when the free flow period, if any, will be.

Locked Basin

In our Locked Basin boats are afloat all states of the tide with access through a manned lock 4.5hrs either side of HW. Boats up to 23m in length overall can be accommodated. Water and electricity is available on all berths.

Tidal Basin

Offering all the facilities of the Locked Basin access is restricted to about 2hrs either side of HW. Craft in the Tidal Basin come to rest on soft mud at LW and all types of keel and propulsion configurations can be accommodated safely. The Tidal Basin shows a significant saving on 5 Gold Anchor facilities at a very economical rate.
